ANWESHA ABANTIKA

anweshaabantika@gmail.com | 9437617519 | Berhampur, India | Linkden | GitHub

PROFESSIONAL SUMMARY

Recent B.Tech graduate transitioning into data analytics, skilled in Python, SQL, and Power BI. Analyzed a 500K+ record production dataset using SQL, with additional project experience in churn prediction and content trend analytics; certified in Oracle Cloud AI Foundations and Deloitte Data Analytics. Seeking a Data Analyst / Junior Data Scientist role.

SKILLS

Programming: Python, SQL

Data Analysis: Pandas, NumPy, MS Excel, EDA, Feature Engineering, Probability & Statistics

Big Data & Cloud: Databricks, AWS S3, AWS IAM, Snowflake

Visualization: Power BI, Matplotlib, Seaborn, Tableau

Database: MySQL, PostgreSQL

Other Tools: Visual Studio Code, Jupyter Notebook

PROJECTS

EduFin SQL Investigation Case | SQL, Databricks | GitHub

- Investigated a 500,000-row real production loan dataset on Databricks through a guided individual case study, identifying planted data anomalies and assessing portfolio risk (₹204.82 Cr portfolio, 11.8% default rate)
- Built SQL queries using CTEs and window functions (LAG) to segment risk by credit score, income, and age, and to model default acceleration over time — pinpointing escalation from Aug 2022 to an Oct 2022 crisis threshold, with exposure reaching ₹944.38 Cr by Jun 2023
- Delivered data-driven business recommendations (lending freeze, collections prioritization, underwriting control restoration) based on findings

Netflix Content Analysis Dashboard | Python, Power BI | GitHub

- Performed EDA in Python (Pandas, Matplotlib, Seaborn) and built a 3-page Power BI dashboard analyzing Netflix's content library across type, genre, rating, and country
- Cleaned raw data (missing values, multi-value fields) and surfaced key trends: 69.7% movies vs. 30.3% TV shows, content peak in 2019, and India's catalog being 92% movie-dominant

Telco Customer Churn Analysis | Python, SQL, Power BI | GitHub

- Analyzed 7K+ customers, identifying a 26.54% churn rate and $139.13K/month (30.5%) revenue at risk, with month-to-month ($121K), fiber optic ($114K), and electronic check ($84K) as top loss drivers
- Found low-tenure, high-charge customers churn at 41.18% and that service adoption cuts churn from 44% to 2%; recommended contract incentives, fiber improvements, and payment migration to reduce leakage

Energy Consumption Analysis Dashboard | AWS, Snowflake, SQL, Tableau | **GitHub**

- Built an end-to-end pipeline (AWS → Snowflake → SQL → Tableau) analyzing energy consumption (KWH) and customer service usage (CSU) across countries, regions, and energy sources
- Found Australia highest in energy use (80,410 KWH), rural areas 5% higher than urban, and Wind as the top energy source; delivered an interactive dual-view Tableau dashboard for cross-market comparison

CERTIFICATIONS

SQL Basics — HackerRank

SQL 50 — LeetCode

Data Fundamentals — IBM

OCI AI Foundations Associate — Oracle

Data Analytics Job Simulation — Deloitte
